## PROFILE SUMMARY

Results-driven Senior Backend Developer with 7.5+ years of experience designing, developing, and deploying scalable Java-based solutions. Expertise in Spring Boot, REST APIs, Microservices, SQL, and cloud integrations (Azure). Adept at leading backend modules, collaborating cross-functionally, and driving project delivery with low defect rates. Recognized for innovation, code quality, and strong communication in agile environments.

## EDUCATION

**B. TECH. - IT** **2014 - 2018**

- **SRM University, Chennai**
- CGPA: 8.73/10

**CLASS 12** **2014**

- DAV Public School , Patna
- Percentage: 86.8%

**CLASS 10** **2012**

- **Kendriya Vidyalaya, Chapra**
- CGPA: 10/10

## TECHNICAL SKILLS

- Java (Java 8+)
- Spring Boot
- Spring MVC
- Hibernate
- JPA
- MySQL
- MS SQL
- Jenkins
- RESTful APIs
- Microservices
- CI/CD
- Agile
- AWS
- Docker
- DevOps
- Git
- Maven
- Gradle
- JUnit
- Mockito
- JMeter
- IntelliJ IDEA
- Eclipse
- Postman

## WORK EXPERIENCE

**Wipro Limited** JUNE '25 - PRESENT
**Technical Lead**

- Modernized a large-scale platform of one of the leading investment bank, managing securities, asset classifications, and investment products by replacing legacy APIs with high-performance Spring Boot microservices and enabling real-time UI integrations.
- Architected and developed asset classification and product hierarchy APIs processing 1L+ product records, integrated with 10+ global trading dashboards.
- Implemented Caffeine-based distributed caching with scheduled refresh, cutting DB query load by ~70% and improving API response time from ~2.5s to under 800ms.
- Led a 7-member backend team for module design, microservice development, and CI/CD integration, achieving 95% on-time sprint delivery and significant defect reduction.
- Optimized deployments on Amazon EKS, improving application scalability and reducing overall AWS infrastructure costs.
- **Tech Stack**: Java 8+, Spring Boot, REST APIs, Caffeine Cache, SQL Server, AWS Cloud, Jenkins, DevOps, Docker, Kubernetes, Shell Scripting

**Cognizant Technology Solutions** NOV '22 - JUNE '25
**Senior Software Engineer**

- Migrated a healthcare application from legacy tech to Java Spring Boot and deployed on AWS cloud, reducing infra costs.
- Led a backend team of 6 for module development, API integration, and production support.
- Ensured <1% post-production defect rate through rigorous code reviews and unit testing, driving successful project outcomes.

**Tech Stack**: Java, Spring Boot, REST APIs, SQL Server, Tomcat

## ACCOMPLISHMENTS

- Got client appreciations for timely delivery and deployment of application.
- Awarded "Top Performer" at Deloitte and EY for quality and performance.
- Received client appreciation and certificate on multiple occasions.
- Graduated with distinction in B.Tech.
- Received CBSE merit certificate for scoring 10 CGPA in Class 10.

**Ernst & Young (EY)** NOV '21 - NOV -'22
**Consultant (Software Engineer)**

- Developed a DSAR app for GDPR compliance, using Spring Boot & SQL, integrated with ElasticSearch.
- Automated data processing from PST, OST, file systems using Tika, Aspose & Tesseract OCR.
- Managed a backend team of 4 and coordinated cross-functional releases.

**Tech Stack**: Java, Spring Boot, SQL, ElasticSearch, OCR Tools, Tomcat

**Deloitte USI** APR '19 - NOV -'21
**Business Technology Analyst**

- Designed and developed RESTful APIs using Java 8, Spring Boot. Led performance tuning and conducted unit testing with JUnit and JMeter.
- Developed a SIM management system to automate the lifecycle of SIM activations, ownership transfers, and disconnections.
- Contributed to building an Event Management Portal for internal and external guest coordination, with end-to-end testing and deployment.
- Collaborated with cross-functional teams for requirement analysis, documentation, and production releases in Agile environments.

**Tech Stack**: Java, Spring Boot, SQL, ElasticSearch, OCR Tools, Tomcat

**Infosys Ltd.** AUG '18 - APR -'19
**Systems Engineer**

- Provided Level 3 technical support for over 10 enterprise applications, ensuring minimal downtime and fast issue resolution.
- Automated daily health check operations by developing SQL scripts and integrating email-based reporting using Excel attachments.
- Streamlined manual monitoring tasks, improving operational efficiency and reducing repetitive effort by 40%.

**Tech Stack:** Java, SQL, Excel Automation, ITIL Support Processes, MS SQL

## PROJECTS

**Global Investment Platform Modernization** at Wipro Limited

**Description:** A large-scale transformation initiative to modernize a financial services platform dealing with securities, asset classifications, and investment products. The goal is to replace legacy APIs with high-performance Spring Boot microservices and enable real-time UI integrations with optimized backend caching CICD Integration and AWS cloud deployment.

**Technical Role:**

- Architected and developed asset classification and product hierarchy APIs handling 1L+ product records across asset classes, powering multiple global trading dashboards.
- Implemented Caffeine-based caching with scheduled refresh, reducing DB load by ~70% and improving response times from ~2.5s to <800ms.
- Standardized JSON schema contracts for dependent dropdowns, ensuring complete UI alignment across modules.
- Led a 7-member backend team, achieving 95% on-time delivery and 30% fewer post-production defects through strict code reviews.
- Delivered 20+ microservices in collaboration with frontend, QA, and DevOps teams, ensuring seamless system integration.
- Optimized Azure Kubernetes deployments, improving scalability by 40% and cutting infra costs by 15%.
- Automated CI/CD pipelines (Jenkins + DevOps) and Dockerized deployments, reducing release cycles from 2 days to 6 hours with zero downtime.
- Established real-time performance monitoring, improving system uptime by 20% and enabling faster issue resolution.

**Technologies and Tools Used:** Java 8+, Spring Boot, Caffeine Cache, REST APIs, SQL (MS SQL Server), AWS, IntelliJ IDEA, JUnit, Git, Jenkins, DevOps, Docker, Kubernetes, Shell scripting

**Facets Extensions** at Cognizant Technology Solutions

**Description:** This project involves migrating a healthcare application from legacy to a Java-based platform. It includes transferring multiple extensions and modules from the classic version to the web version, alongside transitioning the system from on-premise infrastructure to the AWS cloud.

**Technical Role:** As the module lead, I spearheaded the migration from the classic to the web version. I provide guidance and liaise with a team of six as the offshore lead, focusing on analyzing the current design and driving development efforts. Additionally, I collaborate with front-end developers for API integration and offer support to the release management team during production deployment and go-live stages.

**Technologies and Tools Used:** JAVA, Spring , SQL, Eclipse, MS SQL Server Studio, Apache Tomcat

---

**DSAR Application** at Ernst & Young (EY)

**Description:** DSAR is an application where a user can raise a request to know their PII details stored in the organization. The relevant team needs to take up the request, verify the data, and perform the necessary steps to display only the relevant data to the user and mask irrelevant ones. The complete lifecycle of DDC, which includes multiple data sources like online mails, PST, OST, files & folders, various databases, memory cards, etc. completes automatically except for the manual review before closure.

**Technical Role:** In the project, I served as the lead, guiding a team of 4 to develop the application as per industry standards. Collaborating closely with the application architecture, I assisted in determining optimal approaches and technologies for efficient development. Leveraging Spring Boot for backend development and SQL for database support, the application was deployed on Tomcat Server.

**Technologies and Tools Used:** JAVA, Spring Boot, SQL, STS, MS SQL Server Studio, Apache Tomcat

---

**ElastiScan: Silent System Analysis** at Ernst & Young (EY)

**Description**: The project involves conducting a silent scan of systems to gather data, which is then stored in ElasticSearch for subsequent analysis and report generation.

**Technical Role:** In my capacity as the product owner, I designed, developed, and implemented comprehensive Java code for silently scanning systems and storing retrieved data in ElasticSearch for further analytics. The end product was delivered as an executable file, enabling its use as an application on different systems. Various requirements within the project were addressed using tools such as Aspose, Tika, and Tesseract OCR.

**Technologies and Tools Used:** JAVA, Spring Boot, SQL, STS, MS SQL Server Studio, Apache Tomcat

---

**Sim Management Application** at Deloitte USI

**Description:** Handles life-cycle of various mobile activation types Such as new activation, and change SIM. Transfer of Ownership, Permanent disconnection, and digitizing the user data.

**Technical Role:** Designed and implemented RESTful APIs using JAVA 8, Spring Boot, and SQL. Also, was responsible for unit testing and Performance Testing using Jmeter.

**Technologies and Tools Used:** JAVA, Spring Boot, SQL, Spring Tool Suite, MS SQL Server Studio, JMeter
