🔹 Professional Summary

Backend Java Developer with 6+ years of experience designing and building scalable backend systems using Java (8/11), Spring Boot, and Microservices architecture. Expert in transforming monolithic systems into cloud-native microservices, integrating secure OAuth2-based APIs, and deploying distributed systems via Docker and Jenkins. Hands-on experience with Kafka, API Gateway, Spring Batch, and Spring Security. Proven track record of delivering high-performance solutions with CI/CD automation, observability tools, and cloud readiness. Recognized with a Star Performer Award for leading performance optimization and microservices migration.

🔹 Core Competencies

- **Languages:** Java (8/11)
- **Frameworks:** Spring Boot, Spring MVC, Spring Batch, Spring Security, Hibernate, JPA
- **Architecture:** Microservices, Monolithic, Event-Driven Architecture
- **Messaging & APIs:** Apache Kafka, RESTful APIs, OAuth2, API Gateway
- **Databases:** SQL Server, MongoDB
- **Cloud & DevOps:** Docker, Jenkins, AWS (S3, SMTP)
- **Tools & IDEs:** Git, Maven, STS, MyEclipse, VS Code, Postman, JIRA
- **Web Technologies:** HTML5, CSS, JavaScript, jQuery, Bootstrap, JSON, Ajax
- **Testing:** JUnit, Mockito

🔹 Professional Experience

Software Developer

Sapiens, Bangalore Aug 2022 – Present

Project: Reinsurance Application

Tech Stack: Java, Spring Boot, Spring Security, Hibernate, JPA, Spring Batch, Docker, Kafka, OAuth2, API Gateway, Microservices

- Migrated a large-scale monolithic legacy system to modular microservices, reducing deployment time and increasing release frequency by 35%.
- Developed RESTful APIs protected with **OAuth2**-based authentication, integrated with Spring Security and external authorization servers.
- Designed and consumed **Kafka**-based event streams for asynchronous communication between services, improving system decoupling and throughput.

- Routed all service communications through a centralized **API Gateway** for authentication, logging, and traffic control.
- Built and optimized fault-tolerant **Spring Batch jobs** handling millions of records with retry, skip logic, and custom listeners.
- Improved backend performance by 40% by optimizing complex SQL queries and eliminating bottlenecks in data processing.
- Provisioned and managed cloud infrastructure using **IaaS services** on AWS including **EC2, S3**, **RDS** and security groups.
- Containerized services using **Docker** and implemented **CI/CD** pipelines with **Jenkins**, ensuring consistent deployments across environments.
- Enabled distributed tracing using **Zipkin** and **Sleuth**, reducing production incident resolution time by 50%.
- Actively participated in Agile practices including sprint planning, code reviews, retrospectives, and cross-functional collaboration.

Software Developer

TechieAid, Bangalore Jul 2019 – Aug 2022

Project 1: Employee Training Management System

Tech Stack: Java, Spring MVC, Spring Boot, Hibernate, JPA, jQuery, JavaScript

- Developed dynamic **Spring MVC** modules to track employee training and compliance, reducing manual effort by 60%.
- Persisted training content, metadata, and progress tracking using **Hibernate/JPA**, with optimized entity relationships and batch inserts for efficiency.
- Integrated **Apache PDFBox** to generate dynamic training completion certificates in PDF format based on user progress and course metadata.
- Built interactive UIs with jQuery and Bootstrap, enhancing responsiveness across devices.
- Created reusable service layers and REST endpoints for front-end integration, improving code maintainability by 30%.

Project 2: Student Course Tracking Platform

Tech Stack: Spring Boot, Spring MVC, Hibernate, JPA

- Developed modules to manage student progress, course enrollment, Quiz and feedback using **Spring Boot** and MVC architecture.
- Integrated external APIs like **Stripe** (payment processing) and **HelloSign** (e-signature) for seamless third-party workflows.
- Developed scheduled Spring Batch jobs to import and process student data from CSV, improving automation reliability.

- Integrated **Apache Kafka** in a monolithic architecture to enable asynchronous processing of notifications and certificate generation with reliable producer/consumer handling.
- Utilized **AWS S3** for media content storage and **SMTP** for sending event-based email notifications.
- Diagnosed production issues using logs and improved system uptime with proactive fixes and monitoring.

🔹 Education

Master of Computer Applications (MCA)

Bangalore Institute of Technology, Visvesvaraya Technological University (VTU) 2017 – 2019

🔹 Awards & Achievements

🏆 **Star Performer Award** – Recognized for technical leadership and performance optimization during a major microservices transformation initiative.

🔹 Additional Highlights

- Experience designing scalable, cloud-native applications with API security and observability.
- Proficient in memory profiling, performance tuning, and optimizing backend systems under load.
- Involved in multiple POCs for distributed architecture, microservice orchestration, and third-party API integrations.
- Passionate about mentoring peers, improving code quality, and following Agile delivery models.
