PROFFESSIONAL SUMMERY

Results-driven Java Developer with 9+ years of experience in designing, developing, and deploying enterprise-level applications. Adept at working with Java/J2EE, Spring Boot, Microservices and REST APIs. Hands-on experience with CI/CD tools Jenkins and Git, logging and monitoring tools Splunk and cloud-based application deployment. Passionate about writing clean, efficient, and maintainable code while contributing to business growth and innovation.

WORK SUMMARY

- Extensive experience with analysis, design, development, customizations, and implementation of software applications Using Java, Spring MVC, Spring Boot, Restful Web services
- Hands-on experience with **Java 8, Java 17**, **Spring Boot, Microservices, and Kafka**
- Solid understanding of Object-Oriented Programming principles and development practices
- Hands-on experience with Cloud Foundry for deploying, monitoring, and managing applications in cloud
- Deployed microservices on **AWS** using **EC2, S3, RDS**, and **Lambda** for scalable cloud-based banking operations.
- Proficient in **Jenkins, Splunk, and JIRA** for deployment automation, log monitoring, task management.
- Solid understanding of CI/CD pipelines and DevOps practices.
- Skilled in analyzing and translating business requirements into technical solutions.
- Proficient in using development tools such as JMeter, Maven, Gradle, Git, EclEmma, SonarQube, **Jenkins, Docker**, **OpenShift, Kubernetes** and Jenkins.
- Working knowledge of HTML, CSS, JavaScript, and Agile methodologies.
- Passionate about learning new technologies and tackling challenging tasks and responsibilities.
- Strong communication, interpersonal, and teamwork skills self-motivated and a quick learner.

EXPERIENCE SUMMARY

- Cognizant Technology Solutions, Bangalore | August 2016 – Present

TECHNICAL SKILLS

Language, Frameworks	Java17, Spring MVC, Spring Boot, Microservices, Hibernate, Kafka
Development Tools	IntelliJ IDEA, STS, GIT, Apache Maven, Gradle, Apache Tomcat10, Splunk's, ELK Stack, Jenkins, SonarQube, JIRA, JMeter, Postman, Kubernetes, Docker, OpenShift
Databases	MySQL, NoSQL
Methodologies	Agile, Scrum

PROJECT DETAILS

1. Gateway API

Client	Wells Fargo
Technologies	Java17, Spring boot, Microservice, Kafka, Docker, OpenShift, AWS, Rest Api, Git, IntelliJ IDEA, Gradle, Jenkins, Splunk's, Tomcat 10

Project Description:
Developed and enhanced Gateway API for Wells Fargo, enabling seamless account access and financial management. Designed and integrated dynamic splash pages to inform customers about new online banking features upon login, improving user engagement and feature adoption

Responsibilities:

- Implemented circuit breaker design patterns across multiple services to enhance resilience.
- Developed and deployed microservices-based banking APIs using Spring Boot, ensuring modular, scalable, and loosely coupled architecture.
- Implemented the Service Aggregator design pattern to combine responses from multiple downstream microservices into a single optimized API response for client applications
- Integrated Apache Kafka as an event-driven messaging system for asynchronous data processing and microservices communication.
- Migrated services to Java17 for improved performance and maintainability.
- Analyzed exception logs across different environments for issue resolution.
- Identified and resolved vulnerability issues to enhance security.
- Managed and delivered tasks within the turnaround time for both the team and myself.
- Participated in production install calls to validate delivered APIs.
- Actively participated in daily scrums, sprint planning and retrospectives.

2. System EOP (Enterprise Offer Platform)

Client	Mastercard
Technologies	Java 8, Spring Boot, Microservice, Spring core, Tomcat 9, STS, EclEmma, GIT, Jira

Project Description:
Designed and developed a Loyalty Offers Management Platform for MasterCard, enabling global offer management for vendors. Implemented analytics to track and measure offer performance across categories and regions, enhancing business insights.

Responsibilities:

- Developed and enhanced application features, including offer workflows and cloning offers.
- Resolved technical issues and fixed defects to ensure smooth functionality.
- Actively engaged in client interactions to understand business requirements.
- Developed and optimized REST APIs for offer and merchant management.
- Designed and developed business logic and query generation using Java.

- Implemented DB connection and exception handling.
- Involved in performing rest testing using advanced rest client and Postman.

3. Automated Location Control System

Client	Verizon
Technologies	Java, Spring, Hibernate, JSP, Html, JavaScript, MySQL, Tomcat, Eclipse

Project Description:

The purpose of the ALCS or Automated Location Control System is to develop a permanent process for Cable Locate that is to be implemented and supported across the SBC enterprise. The application deals with locating buried facilities at a specified location identified by the customer or excavator. Such requests are received by the One Call Centers and are called as tickets. The One Call Centers pass the ticket information to various utility companies, of which SBC is one.

Responsibilities:

- Resolved and troubleshot technical issues to ensure smooth operation.
- Utilized Spring MVC to integrate UI with the database.
- Participated in User interface Design discussion and interactive approach for UI.
- Developed and implemented enhancements to improve application functionality.
- Involved in Object Oriented Analysis & Design during the project development.
- Configured of xml files. Developed the user interface using Spring POJO class, JSP, and HTML.

EDUCATION

- Master in Computer Application (MCA), GEC, BPUT University, 2014
